## **Calpipe Industries™ Expands Product Line with Introduction of Calbond™ PVC Coating that Protects Conduit Systems in Harsh Environments**

**DOWNEY, CA (December 17, 2012)** – Calpipe Industries™ has expanded its product line with the introduction of Calbond™ PVC coated conduit and conduit fittings. Calbond products feature a 40-mil PVC exterior coating and 2-mil urethane interior coating that provides superior protection for electrical conduit and conduit fittings used in highly corrosive environments and deliver the longest product life cycle in the industry.

With more than 40 years of PVC coating experience, Calpipe Industries combines extensive manufacturing expertise to provide the industry with a complete product portfolio of PVC coated steel or aluminum conduit, elbows, couplings, junction boxes, liquid tight fittings, hazardous location fittings, strut and accessories, as well as the tools needed to properly install PVC coated conduit systems.

“The electrical industry has relied on Calbrite™ for stainless steel conduit, Calconduit™ for steel conduit, and now customers can turn to Calbond for PVC coated conduit, fittings and accessories,” said Jim Johnson, VP of Sales and Marketing at Calpipe Industries. “Our flexible production line capabilities allows Calpipe Industries to provide a complete standard product offering along with quick turn-around of custom coated parts to meet virtually any application or requirement.”

With the industry's newest USA PVC coating factory, Calpipe Industries employs modern manufacturing systems, processes, and quality assurance programs that fully comply with industry standards established by the Underwriters Laboratories (UL) and NEMA.

Calbond PVC coated conduit, fittings and accessories are ideal for a wide range of industries including chemical & petrochemical plants, water and wastewater treatment facilities, power plants, pulp and paper mills, food dairy and beverage industries, pharmaceutical and cosmetics, marine and coastal facilities, offshore platforms, cooling towers, fertilizer plants, breweries and mining.
